ALI TABIKH

GIS & Remote Sensing | Open to remote internships and junior roles

Baalbek, Lebanon (open to remote) | 3lytabikh@gmail.com
LinkedIn: linkedin.com/in/ali-tabikh | Portfolio: 3letabikh.github.io

PROFILE

Physical Geography master's student (M2, research track) with more than 2 years of self-taught, hands-on work in ArcGIS, backed by Esri MOOCs. Built complete desk-based GIS and remote sensing projects from raw data to maps, reports and dashboards: drought monitoring from satellite time series (2001–2025) in Google Earth Engine, health-access (travel-time) analysis, spatial statistics, hydrological modelling and automated map production with Python (arcpy). Fast learner and detail-oriented; looking for a remote GIS internship or junior role.

INDEPENDENT GIS WORK (SELF-DIRECTED, 2024 – PRESENT)

River Basins Atlas of Lebanon – automated mapping & web dashboard Oct 2026

ArcGIS Pro, arcpy (Python), ALOS DEM, Leaflet, Chart.js

- Delineated Lebanon's 16 river basins from a 30 m DEM, with Strahler stream order and morphometric parameters for each basin.
- Automated the atlas: one layout template + Python script produces all 16 map sheets and a full PDF atlas in a single run.
- Published an interactive web dashboard: click a basin to see its map, statistics table and charts.

Access to Health Care – Baalbek-Hermel, Lebanon Oct 2026

Google Earth Engine, ArcGIS Pro, Python (geopandas), WorldPop, OSM; intro use of QGIS, SQL, Power BI

- Built a layer of 22 hospitals and 28 primary health centres from the Ministry of Public Health list, located via OSM and satellite imagery.
- Modelled car travel time to the nearest facility (cost distance on a friction surface), calibrated against real trips.
- Found 11,100 people (2.9 %) live more than 30 min from a hospital, 84 % of them in just 8 cadastres; delivered 4 maps, a dashboard and a 2-page brief with options for health partners.

Agricultural & Water Drought Monitoring – Upper Litani Basin, Lebanon Oct 2026

Google Earth Engine (JavaScript), ArcGIS Pro, Python, MODIS, CHIRPS

- Computed VCI, TCI and VHI drought indices (250 m) for 2001–2025 and mapped drought frequency for 143 cadastres.
- Ran Getis-Ord Gi* hot spot analysis (FDR corrected): found 8 drought hot spots in north Baalbek caza and 13 cold spots in irrigated West Bekaa.
- Measured Qaraoun reservoir surface area from satellite images: −61 % in autumn 2014 vs. 2019; rainfall explains 43 % of lake-area change.
- Redrew 21 faulty cadastre boundaries and delivered 6 maps, charts and a 4-page technical report.

Hydrological Mapping – Litani Sub-basin (West Bekaa) Nov 2025

ArcGIS Pro

- Produced a full map series of a Litani sub-basin (terrain, hydrology, land cover) as an independent case study.

TECHNICAL SKILLS

- **GIS:** ArcGIS Pro, ArcMap – spatial analysis, hydrology tools, hot spot analysis, geodatabases, cartography and map layouts
- **Remote sensing:** Google Earth Engine (JavaScript) – land use / land cover classification (supervised and unsupervised), satellite time series, vegetation and drought indices, water-body extraction
- **Programming:** Python (basic) – arcpy automation, data cleaning and charts
- **Data & tools:** Microsoft Excel, Word, PowerPoint; Git/GitHub; open data (OSM, HDX, OCHA COD, WorldPop)
- **Languages:** Arabic (native), English (very good), French (good)

CERTIFICATIONS, COURSES & EVENTS

Going Places with Spatial Analysis – Esri (MOOC) Mar 2026

GIS Day 2025 – Esri (attendee) Nov 2025

The ArcGIS Imagery MOOC: Foundations and Frontiers – Esri Nov 2025

Data Analytics Using Python – Manara Jun 2025

Make an Impact with Modern Geo Apps – Esri (MOOC) May 2025

EDUCATION

Master 2 (Research) in Physical Geography – Lebanese University Expected 2027

Thesis in final writing stage (spatial and statistical analysis)

Bachelor in Physical Geography – Lebanese University 2023 – 2024
